

A detailed metabolic pathway diagram, likely from a textbook or scientific reference, showing various biochemical reactions and molecules. The diagram is colorful and includes labels for various metabolites and enzymes. Key molecules visible include Glucose-6-P, Fructose-1,6-bis-P, ATP, NADPH, and various amino acids like Aspartate, Glutamate, and Lysine. The diagram is framed by a blue border.

Estela Jacinto, Ph.D.

Dr. Jacinto is a Professor at the Dept. of Biochemistry and Molecular Biology at Rutgers-Robert Wood Johnson Medical School in New Jersey. She obtained her B.S. in Zoology from the Univ. of the Philippines and her Ph.D in Biomedical Sciences from the Univ. of Calif., San Diego under the mentorship of Dr. Michael Karin. She was a Cancer Research Inst. Postdoctoral Fellow in the lab of Michael Hall at the Biozentrum, University of Basel, Switzerland where she helped identify and characterize the two mTOR protein complexes. She has received research funding from the NIH, American Heart Association, Cancer Research Institute, American Cancer Society and New Jersey Commission for Cancer Research. She is one of the recipients of the 2011 Innovative Research Grant from Stand Up to Cancer. She has received the UMDNJ Excellence in Research Award and the Edward III Outstanding Medical Research Scientist Award. Her lab studies metabolism as it relates to cancer, aging and the immune system.
