

UCMC -Liver Transplant Abdominal Imaging – General Guideline

- Type of abdominal imaging to order should be selected based on patients current renal function according to this table
- Frequency of imaging should be performed in accordance with specific guideline/protocol (e.g. pre OLT evaluation, HCC monitoring etc.)
- Measure of renal function should be evaluated case-by-case with consideration of weight, medications, dialysis etc.

Renal Function	Type of Abdominal Imaging
Scr \leq 1.5	Triphasic CT scan
Scr > 1.5	MRI w/contrast (if GFR >30) MRI w/o contrast (if GFR < 30)
Scr > 1.5 and contraindication to MRI	Ultrasound w/doppler
