Promotions
Jennifer Schulz, MD has been promoted to Associate Professor of Radiology effective September 1, 2021.
Marek Kukla, MD has been promoted to Adjunct Associate Professor of radiology effective September 1, 2021.
Jennifer Scheler, MD has been promoted to Associate Professor of Radiology effective September 1, 2021.

And innovator. “Her national presence, and her role as an advisor to the ACGME is unparalleled. We recognize her national presence, and her role as an advisor to the ACGME is unparalleled. We recognize her

We would like to welcome these new faculty members to the Division, and enjoy treats from Drs. Maegan Chan, Alisa Kanfi and Juliana Tobler.

Alden Receives Award
The Department of Radiology at the University of Cincinnati College of Medicine has presented the 2021 Alden Award to Rose Alden, MD. The award is presented annually to an outstanding junior faculty member who has made significant contributions to the program. This year’s recipient, Rose Alden, has been highly influential in the development of the program and has played a key role in the success of the residents.

Ohio House Bill Would Improve Breast Cancer Screening
State Representative Tammy Schmidt (R-Lowellland) and Sadieck Danos (D-Cincinnati) announced Ohio House Bill 1764, which would expand screening for breast cancer. The bill would make sure that all women over the age of 40 are able to receive free mammograms, regardless of their insurance status. This would help to ensure that more women are able to get the care they need to detect breast cancer early, when it is more easily treated.

Mary C. Mahoney, MD, FACP
Benjamin D. Brown, MD, Chief of Breast Imaging Services
From the Chair
We have a new academic year, the department is returning at last to in-person work. The medical students are back on campus, we have a new class of residents and fellows, and we will welcome back our new faculty members. We have learned so much over the past year and a half about how we work and what is important. Working in a hospital in the midst of a global pandemic was a profound and challenging. Most of us have had the opportunity to adjust to the new normal and have the privilege of returning to our jobs for the first time that most are familiar. Starting COVID-19 has been still a small part of our lives, but we are now perhaps in the United States, and the worries about a resurgence are still present. Nonetheless, although this may not be the end of the pandemic, we are at a new beginning. So, what is our new normal? What do we expect our department to do differently? How do we envision our work day to be structured? Everyone will view the situation with different reactions and have very different answers to these questions, and we need to be ready to adjust and adapt as each situation arises.

The value of contributions that are possible only with presence. Yes, we can work productively from homes, but we are working as radiologists. It is about teaching the residents, working with the technologists, consulting with our referring physicians, and being members of a team that supports each other. So, to Dr. Mahoney, in the Faculty Promotions section, we look forward to working with you and your team.

A new academic year, the department is turning at last to in-house work. The medical students are back on campus, we have a new class of residents and fellows, and we will welcome nine new faculty members. We have learned to reach out over the past year and half about how we work and what is important. Working in a hospital in the midst of a global pandemic was new and challenging. Most of us were healthy enough to be flexible enough to cope the demands and now have the privilege of returning to our jobs for the first time that many are reluctant. Dealing COVID-19 behind us. For all small facts, particularly as we hear much about the Delta variant, the current surge in cases across the United States and the world is making us aware of the seriousness of the situation. Nonetheless, although this may not be the end of the pandemic, we are at a new beginning. So, what is our new normal? What do we expect our department to do differently? How can we expect our work day to be structured? Everyone will view the situation with differences and have varied different answers to these questions, and we need to be gentle with ourselves and with each other. We remain mindful, however, to maintain that air of confidence in our work, the value of the contributions that are possible only with precision. Yes, we can work productively from home, but our work as radiologists is about more than productivity—it is about teaching the residents, working with our referring physicians, communicating with our referring physicians, and being members of a team that show up for one another. There is much to be said for the flexibility of working from home, but nothing can replace the magic that happens when we are together. So we learn, it will be with a focus on learning from our experiences, incorporating the need of in-person ways, we have learned to work into our new routines, and being grateful that we are able to do what we do for our patients, our referring physicians, and being members of a team that show up for one another.

Ohio House Bill Would Improve Breast Cancer Screening State Representative Jon Paul Schmidt (R-Loveland) and Sedrick Dowd (D-Cincinnati) announced Ohio House Bill 1274, or the “Public Breast Cancer Awareness, early detection screening and intervention Act.” The bill expands mammography coverage to include advanced screening with tomosynthesis (3D mammography) and improves medical and commercial insurance to cover supplemental screening for adult women with dense breast tissue or elevated risk for breast cancer, and updates patient notification requirements. The bill is intended to ensure that women who are aware of their breast density are given the necessary access to tests that can detect breast cancer earlier, when it is more easily treated. “It is important that the bill will be floor-sitting. floor that will be brought to the floor this fall.”
Senior Banquet

The Radioncology Department

Senior Banquet was held Saturday June 19 at the Audubon Pavilion on Milford St. downtown Cincinnati. It was attended by UC Radioncology Residents and Fellows, and their family and guests. 

The Division Teaching Award went to Breast Imaging.

The Anderson Pavilion has a view of the river and Kentucky skyline.

Breast Imaging Division

Dr. Vijapura received the Harold B. Spitz Award for Excellence in Teaching.

Dr. Lewis met his wife Caitlin, who was also attending UC, during summer camp in 2004. They started dating, and eventually focused on Radiology. Breast Imaging was especially intriguing to him and matched here and stayed through Radiology Residency, Fellowship, and eventually focused on Radiology, Breast Imaging was especially

Meet our New Residents and Fellows

The Radiology Residency Class of 2022 began on July 1 with these members:

Our new Residents include:

**NEW RESIDENTS**

+ Alex A. Berkel 
  Mayo Clinic, Phoenix, AZ
+ Tony Larder 
  University of Rochester
+ Alex Kieturakis 
  University of Rochester
+ Tyler McCurdy, DO 
  University of Rochester

Our new Fellows include:

**NEW FELLOWS**

+ Dan Lyons 
  Mayo Clinic, Phoenix, AZ
+ Tyler McCurdy, DO 
  University of Rochester
+ Tyler McCurdy, DO 
  University of Rochester
+ Alex Kieturakis 
  University of Rochester

2022 Residents Match to Fellowships

Congratulations to the Radiology Class of 2022 for successfully matching into these fellowship training programs.

**PULMONARY**

- Amanda P. Graham 
  University of Rochester
- Jessica M. LaPrairie 
  University of Rochester
- Andrew C. Tewriter 
  University of Rochester

**ENDOCRINOLOGY**

- Charles T. Allopa 
  University of Rochester
- Daniel J. Dillman 
  University of Rochester
- Daniel J. Dillman 
  University of Rochester
- Daniel J. Dillman 
  University of Rochester

**RADIOLOGY**

- Daniel J. Dillman

FACULTY PROFILE: Kyle Lewis

Specialist residency training at Michigan State Medical School, followed by fellowship training in pediatric radiology, and alpha-1 antitrypsin disease developed, became his first choice. After his transitional year in Grand Rapids, he matched into a fellowship at the Mayo Clinic. In 2010, he joined the radiology faculty, and a faculty position in breast imaging.

Dr. Lewis says he was attracted to a number of specialties early in medical school, including surgery and neonatal medicine, but he eventually focused on radiology. Breast imaging was especially intriguing. “It was the unique patient interaction, which is especially like, and involvement in cancer.”

Dr. Lewis met his wife, Colleen, who was also attending UC, during his residency. They now have one-year-old daughter Maia—that makes three native Cincinnati to whom he sent love.

Our new Fellows include:

1. Dr. Vijapura received the Harold B. Spitz Award for Excellence in Imaging and Education.
2. Charmie Vjapura was awarded the Benjamin Felson Resident Teaching Award.
3. Mugaes Chou received the Benjamin Felson Faculty Teaching Award.
4. Lily Wang was acknowledged for her excellence in imaging and education.

Meet our New Residents and Fellows

The Radiology Residency Class of 2023 began on July 1 with these members:

FACULTY PROFILE

Kyle Lewis

Assistant Professor, UCI Medical Center

Dr. Lewis received his medical degree from the University of Cincinnati College of Medicine and completed his residency at UCI Medical Center. He then went on to fellowship in abdominal imaging at UCI Medical Center.

2022 Residents Match to Fellowships

Congratulations to the Radiology Class of 2022 for successfully matching into these fellowship training programs:

1. Alexa Jameson
   MR1, University of California, San Francisco

2. Alex Schumacher
   Body Imaging, NYU Grossman School of Medicine

3. Tony Cartier
   Body Imaging, Mayo Clinic, Phoenix AZ

4. Jeremy D. Brown
   Breast Imaging, UC Medical Center

5. Benjamin Felson
   Nuclear Medicine, UC Medical Center

6. Dr. Braley
   Neuroradiology, UC Medical Center

7. Dr. Lewis
   Neuroradiology, University of Miami/Jackson Memorial Medical Center

8. Atharva Thakore
   Pediatric Radiology, UC Medical Center

9. Dan Lyons
   Neuroradiology, NYU Grossman School of Medicine

10. Jared Vearrier
    Breast Imaging, UC Medical Center

11. Charles (Chaz) Shelton
    Breast Imaging, UC Medical Center

12. Bryan Boyce
    Breast Imaging, UC Medical Center

We have it! As we usher in a new academic year, the department is greeting anew at its new house. The medical students are back on campus, we have a new class of resident physicians, and we will welcome more than three faculty members. We have learned to pack much over the past year and a half about how we work and what is important. Working in a hospital in the midst of a global pandemic was unique and challenging. Most of us were healthy enough to battle the battle and recover from the disease and now have the privilege of returning to our jobs for the first time since they were eliminated. Despite COVID-19’s battle, we all still see small faith, particularly as we hear more about the Delta variant, the common antiseptic in across the United States, and this worry about a resurgence amid COVID-19. Nonetheless, although they may not be the end of the pandemic, we are at a new beginning. So, what is our next normal? What do we expect our department to do differently? Because how do we expect our work productivity—it is about teaching the residents, consulting with our referring physicians, and being members of a team that show up for one another. There is so much to be said for the reality of returning from home, but nothing can replace the magic that happens when we are together. In our return, it will be with a focus on learning from our experiences, incorporating the most of the way we have learned to work into our new routines, and being grateful that we are here, together—a bit more for usual, but wiser and stronger.

Ohio House Bill Would Improve Breast Cancer Screening State Senators Jennifer Roberts Schmidt (R-Loveland) and Sadie Dorman (D-Cincinnati) announced Ohio House Bill 1014, which was introduced in a July 7 House committee. The bill includes mammogram coverage to include advanced screening with tomosynthesis (3D mammography). Coverage and is uploaded by our residents, and have vastly different answers to these questions, and we need to be gentle with ourselves and with each other. We need to work very well, however, the human element of our work, or the value of contributions that are possible only with purpose. Yes, we can work productively from home, but our work as radiologists is about more than productivity—it is about touching the residents, consulting with our referring physicians, and being members of a team that show up for one another. There is so much to be said for the reality of returning from home, but nothing can replace the magic that happens when we are together. In our return, it will be with a focus on learning from our experiences, incorporating the most of the way we have learned to work into our new routines, and being grateful that we are here, together—a bit more for usual, but wiser and stronger.
